examined at : 24-10-24 09:47:50

follow recommendations of this health report to keep your site healthy

## Meta Description

Quick, free, online unit converter that converts common units of measurement, along with 77 other converters covering an assortment of units. The site also includes a predictive tool that suggests possible conversions based on input, allowing for easier navigation while learning more about various unit systems.

### Short Recommendation

Your meta description exceeds 150 characters. It's not good.

## Seo Friendly Links

### Short Recommendation

Links of your site are SEO friendly.

#### Favicon

## Short Recommendation

Your site have favicon.

## Short Recommendation

Your site does not have any image without alt text.

## Doc Type

### Doc Type : <!Doctype Html>

## Short Recommendation

Page have doc type.

### Depreciated Html Tag

### Short Recommendation

Your site does not have any depreciated HTML tag.

### Html Page Size

Html Page Size : 15 Kb

## Short Recommendation

HTML page size is > 100KB

## **Gzip Compression**

## Short Recommendation

GZIP compression is disabled.

Inline Css

Short Recommendation

Your site have 5 inline css.

#### Inline CSS

<div id="unquickcalc" style="display:none;"></div>

<input type="text" id="toVal" name="toVal" style="background-color:#eeeeee;" class="ucinput" readonly>

#### Internal Css

#### Short Recommendation

Your site does not have any internal css.

### Micro Data Schema Test

#### Short Recommendation

Site failed micro data schema test.

#### Ip & Dns Report

# IPv4: 69.10.42.204

#### udit Data

#### **Resources Summary**

Aggregates all network requests and groups them by typeLearn More

Eliminate Render-Blocking Resources Potential savings of 680 ms

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. <u>Learn More</u>

#### Efficiently Encode Images

Optimized images load faster and consume less cellular data. Learn More

#### Enable Text Compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. <u>Learn More</u>

Serve Static Assets With An Efficient Cache Policy 7 resources found

A long cache lifetime can speed up repeat visits to your page. Learn More

## Minimize Third-Party Usage Third-party code blocked the main thread for 0 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. <u>Learn More</u>

## Total Blocking Time

#### 0 ms

Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds.

## Javascript Execution Time 0.0 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn More</u>

#### Defer Offscreen Images

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. <u>Learn More</u>

## Server Backend Latencies

#### 0 ms

Server latencies can impact web performance. If the server latency of an origin is high, it's an indication the server is overloaded or has poor backend performance. Learn More

### Properly Size Images

Serve images that are appropriately-sized to save cellular data and improve load time. Learn More

#### Reduce Unused Css

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. <u>Learn More</u>

Avoids Enormous Network Payloads Total size was 40 KiB

Large network payloads cost users real money and are highly correlated with long load times. Learn More

## Minimizes Main-Thread Work 0.4 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn More</u>

## Avoid Chaining Critical Requests

1 chain found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. Learn More

## Avoids An Excessive Dom Size 366 elements

A large DOM will increase memory usage, cause longer Learn More

### Avoid Multiple Page Redirects

Redirects introduce additional delays before the page can be loaded. Learn More

## **Minify Javascript**

Minifying JavaScript files can reduce payload sizes and script parse time. <u>Learn</u> <u>More</u>

## User Timing Marks And Measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. <u>Learn More</u>

## Network Round Trip Times 0 ms

Network round trip times (RTT) have a large impact on performance. If the RTT to an origin is high, it's an indication that servers closer to the user could improve performance. <u>Learn More</u>
