Audit Data

Resources Summary

Aggregates all network requests and groups them by type[Learn More](#)

Eliminate Render-Blocking Resources

Potential savings of 1,650 ms

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. [Learn More](#)

Efficiently Encode Images

Potential savings of 1,678 KiB

Optimized images load faster and consume less cellular data. [Learn More](#)

Enable Text Compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. [Learn More](#)

Serve Static Assets With An Efficient Cache Policy

53 resources found

A long cache lifetime can speed up repeat visits to your page. [Learn More](#)

Minimize Third-Party Usage

Third-party code blocked the main thread for 10 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. [Learn More](#)

Total Blocking Time

80 ms

Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds.

Javascript Execution Time

0.4 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

Defer Offscreen Images

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. [Learn More](#)

Server Backend Latencies

0 ms

Server latencies can impact web performance. If the server latency of an origin is high, it's an indication the server is overloaded or has poor backend performance. [Learn More](#)

Properly Size Images

Potential savings of 491 KiB

Serve images that are appropriately-sized to save cellular data and improve load time. [Learn More](#)

Reduce Unused Css

Potential savings of 18 KiB

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn More](#)

Avoid Enormous Network Payloads

Total size was 3,579 KiB

Large network payloads cost users real money and are highly correlated with long

load times. [Learn More](#)

Minimizes Main-Thread Work

0.8 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

Avoid Chaining Critical Requests

3 chains found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. [Learn More](#)

Avoids An Excessive Dom Size

724 elements

A large DOM will increase memory usage, cause longer [Learn More](#)

Avoid Multiple Page Redirects

Redirects introduce additional delays before the page can be loaded. [Learn More](#)

Minify Javascript

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn More](#)

User Timing Marks And Measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. [Learn More](#)

Network Round Trip Times

0 ms

Network round trip times (RTT) have a large impact on performance. If the RTT to an origin is high, it's an indication that servers closer to the user could improve performance. [Learn More](#)
